## News from PT Hydraulics Australia... More new products

**GLOBE**  
AIR MOTORS

In utilising the experience of our staff, PT Hydraulics are now offering filtration solutions for industrial applications. As a result, we have recently built such units as pressurised transfer carts and a 70 lpm offline filter unit as seen below.

70 lpm Offline  
Filter Unit

We will soon be releasing an updated product catalogue incorporating the fluid management products PT Hydraulics will offer to our distributors. These will include Filtration Units, Tank Breather Options, and Condition Monitoring Products. When compared to some products in the market today, our new range will offer a cost effective and quality alternative.

Using these new product line pieces coupled with our ever increasing manufacturing abilities we can produce customised units for specific applications ensuring your job is completed with ease. Contact PT's Sales Team for more information.

## Offline Filtration System

 **fairfilter**  
A Quality Filtration Company

When setting up an Offline Filtration System ideally the suction and return lines should be as far apart from each other as possible. If there are baffles in the reservoir, the suction and returns should be on opposite sides at the very least. If a return and suction line for offline filtration in the system is in place, ensure the suction line of the offline circuit is close to the main system return to reservoir, about 5 to 10 inches from the bottom. The suction line should also be as close to the offline pump as possible and the return line placed at the opposite corner of the reservoir. If possible, include a diffuser at the termination and try to get the termination end about half way up the level of the oil.
