MiniPro Directional Valves

vetter

MiniPro Directional valves are an ideal choice for use with our Stone DC Power Packs and provides you with the most compact and versatile valve of its kind. MiniPro can be mounted directly onto any standard Stone Power Pack, micro switches are included for DC motor activation. The MiniPro is designed for low flow (up to 20l/min) applications and provide un-equalled control characteristics compared to any other valve of this type.

handy hydraulic hint

When using any water-glycol fire resistant hydraulic fluid, always monitor the water level to insure that the required percentage of water is maintained (typically around 50%). Naturally, if this product is used in an application where the fluid normally runs hot, the water will more rapidly evaporate so weekly monitoring may be necessary to insure the integrity of the product is maintained related to fire retardant and safety qualities.
