# ATO

## HYDRAULIC POWER

Our ATO Program has come a long way over the few years that it has been in operation. Not only has the number of "Assemble To Order" units being produced increased but

the complexity and intricacy of the units being built has also developed. All ATO units are built from quality imported and locally sourced components and assembled in-house by our highly skilled fitters.

We specialise in fully wired ATO Units with pendants or wireless controls however also offer the option of units with start/stop and control buttons in an enclosure which is attached to the unit. An extensive range of AC and DC, air, petrol and diesel motors are available with a multitude of options relating to manifold type, valve type and other hydraulic components. Units are finished in a satin black powder coating as standard or your choice of colours or coating.

Determining the right ATO Unit for you is simple by using our easy to understand "Request for Quotation" sheet (available at our website). This sheet enables you to clearly identify which components you require enabling us to supply you with a favourable quote as quickly as possible and get your ATO Unit on the production line.

## handy hydraulic hint

Always ensure oil leaks are repaired quickly and efficiently in any hydraulic unit. Where there is oil leaking there is dirt and contaminants re-entering the system, not only this but a leak of just 1 drop per second equates to over 1500L in a 12 month period – quite a costly leak!!
