HYDRAULIC POWER

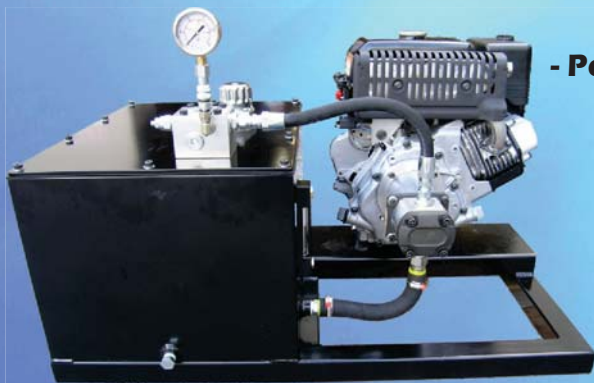

Building Custom Built Power Units

Our "ATO" (Assemble To Order) Hydraulic Power Units are built from quality imported and locally sourced components. Each unit is finished with satin black powder coating as standard or alternatively your choice of colours or coatings can be applied. We specialise in fully wired Power Units with pendants or wireless controls. Alternatively, we can build units with start/stop & control buttons in an enclosure which is attached to the unit.

Over the years our ATO Power Units have developed into quite sophisticated power packs incorporating a range of hydraulic components and expertise. So, next time you require a power unit that isn't quite "off the shelf" be sure to give us a call and ask about our ATO Custom Built Power Units.

Standard Components on ATO Hydraulic Power Units

- Gear or Piston Pumps -
- Manifolds with up to 6 Valve -
 - Hi-Lo Manifolds -
 - Pressure Gauges -
 - Test Points -
 - Filler Breathers -
