Maintenance Sets

Power Teams Maintenance Sets offer a complete package of hydraulic system components for a range of industrial applications. Contained in a sturdy portable carrying case, the matched hydraulic system components, adaptors and hydraulic spreader are ideal for pushing, pulling, lifting or straightening jobs in remote locations. All component in the Power Team Maintenance Sets are rated to the full 10T capacity at 700Bar, this includes all fittings, extension rods and saddles.

There are three sets available, the difference being the hydraulic pump in each kit. There is an electric pump, hand pump and light weight hand pump version of the sets ensuring that the Power Team Maintenance set will meet and exceed your hydraulic needs.

IM10E

Component	Part #
Hydraulic Spreader	HS2000
Pump	PE102-220
700 bar Gauge	9041
Tee Adaptor	9670
Hose & Coupler	9754
90° V Base	25395
Threaded Coupler	25664
Serrated Saddle	31772
Flat Base	32325
Cyl Support Base	420062
Cylinder	C1010CBT
Cylinder	C106CBT
Storage Case	350722
Extension Rods:	
127 mm	350897
254 mm	38909
457 mm	350898

handy hydraulic hint

When testing hydraulic cylinders it is important that the cylinder is tested throughout the complete stroke of the cylinder. Often, when cylinders are used on specific applications they can wear flat spots on the body of the cylinder which cannot be detected if the tests are only completed at full stroke. Testing should be done to the full rated pressure of the cylinder at 1/4 stroke, 1/2 stroke, 3/4 and just below full stroke of the cylinder. This will test the seals across the range of the cylinder bore.
