

Training with PT Hydraulics Australia

Did you know...

PT Hydraulics provides Service Training for Power Team Hydraulic Tools & Equipment?

PT HYDRAULICS SERVICE TRAINING

PT Hydraulics conducts regular Power Team Service Training inviting participants from all parts of Australia. The most recent training was conducted in Perth and proved to be a great success. Areas covered include hydraulic procedures and safety, basic hydraulic principles and theory and the servicing of Power Team pumps, cylinders, valves and accessories.

As a result of completing the service training your hydraulic knowledge will be greatly increased and your business is qualified to be an authorised Power Team Service Centre.

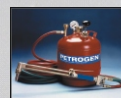

The next PT Hydraulics Service Training is scheduled for the 23rd to the 26th June, to be held in Melbourne at PT Hydraulics Headquarters. If the popularity of our previous Service Training Courses are anything to go by it would be best to book your place now as numbers are limited.

PT HYDRAULICS SAFETY TRAINING

PT Hydraulics conducts Safety Training Courses for High Force Hydraulic Tool users. These courses are performed at your customer's workplace and are designed to improve workplace safety and efficiency in industries where hydraulic equipment is used extensively. This year more than 400 people from industries such as construction, engineering, infrastructure, utilities, manufacturing, mining, mineral processing, transport and maintenance workshops have attended our safety training courses.

Safety Training includes promoting workplace health and safety and reducing injuries and accidents by encouraging correct usage practices and extending equipment life through the correct use, care and maintenance of Hydraulic Tools and Equipment.

INTRODUCING... PETROGEN

Petrogen Oxy-Gasoline Portable Cutting System is the safest Oxy-fuel torch in the world. **WHY?**

VISIT OUR WEBSITE TO FIND OUT

Petrogen cutting torches and accessories offers a system that uses regular Petrol as its fuel, giving both incredible performance and cost savings, whilst also proving safer than alternative oxy-fuel systems (Acetylene, Propane etc.)

PT Hydraulics looks forward to demonstrating the system to all potential customers and discussing the advantages, so please do not hesitate to contact your Regional Sale Manager or PT Hydraulics Head Office for more information or to arrange a demonstration.

Want more information?
