Did you know that we offer a Weather Resistant Hydraulic Pump?

The PE554W has an enhanced component protection for use in dusty and damp environments as well as a sealed electrical enclosure with dust-tight and rain resistant rating of IP65. The plastic motor shroud provides additional protection for the motor housing making this Power Team Weather Resistant Pump ideally suitable for the construction and mining industries where its versatility can withstand outdoor weather conditions and tough environments.

All other components are common to the standard PE55 series. The pump is also available in other PE55 configurations as required for your particular application.

Power Team Hydraulic Oil **SALE**

Until the end of February 2010 we are offering a special price on our Premium Power Team Hydraulic Oil. Purchase a bulk pack consisting of 4 x 3.8L Hydraulic Oil (Part No. 9637) for a heavily discounted price.

Offer valid till 26th February 2010

handy hydraulic hint

Normally an oil operating temperature of 30-60°C ought to be aimed at since the life of hydraulic oil is strongly dependent on its operating temperature. The rule-of-thumb is that the useful life of oil is halved for every 8°C the temperature rises above 60°C. That is to say, at 90°C the life of the oil is only about 10% of its life at 60°C.
