

Protection Covers

The LUKAS Protection Covers protect paramedics, rescuers and also the victim against injury that might be caused by sharp edges arising from the use of hydraulic cutters.

Protection hoods:

One each will be put over A- or B-post stump after the roof removal. When fixed with the integrated tightening strap the hoods will safely remain in the intended position in any case.

Protection blankets:

Can be used to cover long sharp edges all around the vehicle, e. g. in the roof area. Fitted with powerful sewed-in magnets they can easily be attached to any metal part of the vehicle.

Highlights:

- ✓ the surfaces out of extremely wear-resistant Cordura® (only by DuPont) and Trevira® Complan prevent water absorption and are easily washable
- ✓ inlaid into the covers are several layers of special fleece. In contact with a sharp edge millions of microfibers are compressed so the cover becomes almost impervious
- ✓ an air bolster between the fiber layers gives a maximum of soft yet strong protection
- ✓ the system is set up in a few seconds
- ✓ will stay in position in any case

With one set one longitudinal side of a vehicle and, if necessary, a sharp roof edge can be covered. For complete protection of both sides a second set is necessary.

Technical Data

Item	dimensions	weight	number
Protection hood	13.8 x 11.8 in. / 35 x 30 cm	0.3 lbs / 135 g	2
Protection hood	25.6 x 25.6 in. / 65 x 65 cm	1.17 lbs / 530 g	1
Protection hood	65.0 x 25.6 in. / 165 x 65 cm	2.3 lbs / 1050 g	1

Packing:

The system comes in a water-repellent Nylon carry bag.
